- Designed to pump long with less downtime and extended packing life. Self-adjusting sprint loaded fixed packings last up to three times longer than the competition. Large sight glass for visual packing inspection.
- Air Assisted Airless HVLP Spray Gun provides the latest atomisation technology.
- Stainless Steel system – pump and gun.

- Unique HVLP air caps provide a 'softer fine spray' for superior finish quality and higher transfer efficiency than competitors.
- Lightweight and Operator friendly design with lighter trigger pull tension.
- Easy to remove 'in-line' needle assembly for quick maintenance.
- Adjustable needle packing and 'balanced' air valve design.
- Gun handles Solvent and Waterborne coatings as standard.
- Standard flat tips, fine finish tip and twist tip cleaner available with a wide range of tips from 0.18mm to 0.89mm.

# A guide to the DSEAR and ATEX Directives

## What is DSEAR and ATEX?

The EU Directives 94/4/EC (ATEX 95) "Equipment for use in potentially explosive atmospheres" and the "Workplace directive" 1999/92/EC (ATEX 137) are the European directives, which ensure employers work practices and manufacturers of equipment used in potentially explosive atmospheres, are safe and do not create potential explosion hazards. In other words, its all about health and safety at work for workers who handle and work with flammable and dangerous materials, to ensure they are not at risk of an explosion from the equipment and work practices.

The ATEX directives are implemented into UK law by the regulations "Dangerous Substances and Explosive Atmospheres Regulations" known as DSEAR 2002 and the "Equipment and protective systems for use in potentially explosive atmospheres" regulations 1996. DSEAR became mandatory in July 2006. DSEAR is a legal Health and Safety requirement which is enforced by the HSE, local authorities and in part the fire service.

## ATEX Compliance

As a manufacturer of equipment used in potentially explosive atmospheres, we comply with this directive by applying the CE mark along with the Explosion protection symbol  and other markings to show compliance of that product.

Each piece of equipment must be marked with information to enable the user to assess its suitability to be used in the environment it is intended to be used in. The equipment could be marked with the following;

- Name and address of Manufacturer
- The CE mark
- If the equipment has been certified by a Notified Body, their reference follows the CE mark
- Equipment model number/name/type
- Year of manufacture
- The Explosion protection Symbol 
- The equipment Group II and category 1, 2 or 3
- For Gas (G) e.g. Group 2, Cat 2 Gas

## Workplace regulations DSEAR 2002

The ATEX 1999/92/EC workplace regulations are implemented in the UK through the DSEAR 2002 Regulations. The duties for employers and owners under DSEAR are;

- Carry out a risk assessment of work involving dangerous substances and eliminate or reduce any risks identified.
- Provide equipment and procedures for accidents and emergencies.
- Instruct and train employees.
- Areas where hazardous explosive atmospheres may occur are classified into zones and where necessary marked with a specified "EX" sign at their points of entry; (eg spray booths, mix rooms, paint stores etc).
- Provide equipment and protective systems which comply with ATEX Regulations appropriate for the Zone rating of the hazardous area.
- Document all the above in an Explosion Protection Document.

## Avoidance of Hazards associated with Spraying flammable materials

The main hazard with spraying is electrostatic discharges and mechanically generated sparks. To avoid these ignition hazards, you should;

- Only use equipment CE marked to ATEX regulations. Most Finishing Brands Products are CE marked to ATEX eg Sprayguns, Digital Gauge, hoses. If in doubt, contact your distributor or Finishing Brands.
- The equipment must be installed and used in accordance with the instructions provided by the manufacturer(s).
- Ensure metallic parts of the equipment are earthed and bonded together (e.g. pressure feed tanks and pumps) to avoid potential differences between them. Metallic portable containers must be bonded and earthed. Check earth continuity at regular intervals. Keep earthing points clean.
- Use conductive air and fluid hoses to avoid static charging from air and fluid flows.
- Equip Operators with anti-static clothing and conductive footwear. Remove contaminated clothing if leaving the workplace into areas where ignitions hazards may occur e.g. smoking.
- Clean equipment with non-flammable liquids, or use safety cans with flame arrestors for use with flammable liquids.
- Removal of paint residues with scrapers made of plastic or non-sparking materials (steel scrapers can create sparks). Coat walls with strippable/peelable coatings to avoid removal of residues by mechanical means.
